

Natural, durable and customisable. Discover our recycled bricks with up to 40% recycled content in the raw material mix. Our team of experts in the in-house ceramics laboratory ensures that the usual high product quality is achieved with the required properties for bricks despite the new composition of raw materials.

As with all our products, we can also produce the recycled bricks in a format and colour to suit the planner's request.

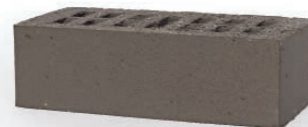

Our newly developed recycled bricks and recycled pavers impress with their colour fastness, naturalness and high recycled raw material content. In addition to the use of own material, the use of external secondary raw materials is also possible.

Our ultimate goal is the continuous improvement of our products and processes. Our processing plants have been modernised accordingly to enable the reuse of brick material. Bricks can currently be produced in our plant with a recycled content of up to 40%. Taking the technical ceramic characteristics of the raw materials used into account, the usual high product quality is achieved with the required properties for bricks.

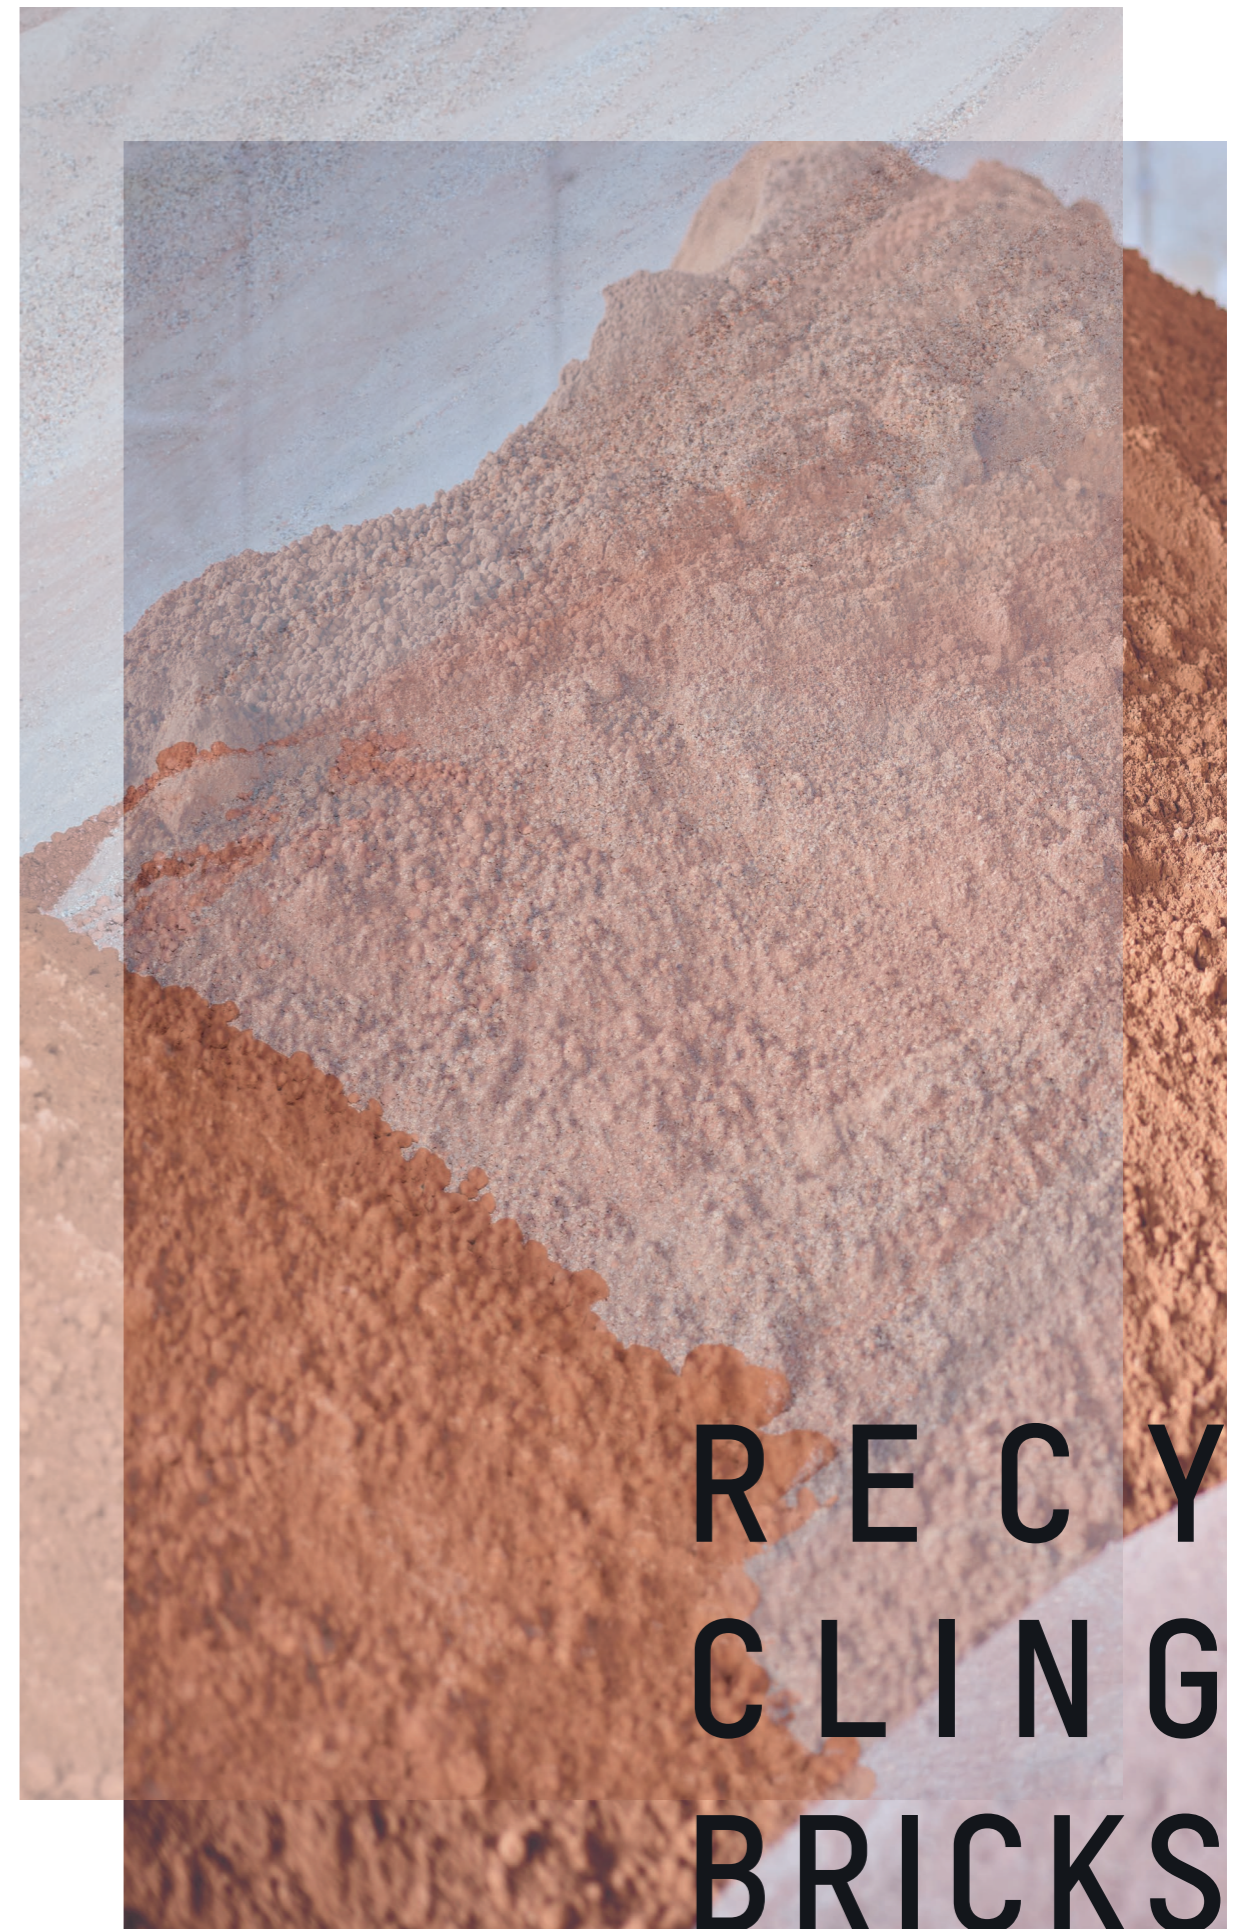

Excess bricks, broken bricks or bricks that have been dismantled and sorted by type, for example, are suitable for the production of recycled bricks. In addition, secondary raw materials from other manufacturers can also be processed to produce recycled bricks. For example, through our new cooperation with HOFMANN NATURSTEIN. With the help of our team of experts, the raw material composition could be optimised so that sawing sludge, which is produced during the processing of natural stone, could be used as a secondary raw material for the recycled bricks.

For this raw material mix, we have developed five colours, as an example, which you can see here. On our website you will get more detailed information. You will also find the option to order samples or download textures for the colours shown.

IN COOPERATION WITH HOFMANN NATURSTEIN
